Beta-hCG (Human Chorionic Gonadotropin) Quantitative, Serum

Order Name: **HCG QUANT**Test Number: 3601425
Revision Date: 09/27/2023

TEST NAME			METHODOLOGY	LOINC CODE	
Beta-hCG (Human Chorionic Gonadotropin) Quantitative, Serum		Chemiluminescence Assay	21198-7		
SPECIMEN REQUIREMENTS					
Specimen	Specimen Volume (min)	Specimen Type	Specimen Container	Transport Environment	
Preferred	2mL (1mL)	Serum	Clot Activator SST (Gold Top)	Refrigerated	
Alternate 1	2mL (1mL)	Plasma	Lithium Heparin PST (Light Gr Top)	reen Refrigerated	
Instructions	Stability: Ambient 1 days. Refr	Stability: Ambient 1 days. Refrigerated 7 days. Frozen 1 year.			
		This test is suitable for both male and female patients applicable only to testing performed at 41st and Mingo location; see Clinical Use section below for more information.			

GENERAL INFORMATION			
Testing Schedule	Daily		
Expected TAT	1-3 days		
Clinical Use	Useful for diagnosis of pregnancy, investigation of suspected ectopic pregnancy and monitoring in vitro fertilization patients. Elevated hCG concentrations not associated with pregnancy may be found in patients with other diseases such as tumors of the germ cells, ovaries, bladder, pancreas, stomach, lungs, and liver. Results obtained with different assay methods should not be used interchangeably in serial testing. It is recommended that only one assay method be used consistently to monitor each patient's course of therapy.		
CPT Code(s)	84702
