## Cholinesterase, Plasma

Order Name: CHOLINES P Test Number: 3600925 Revision Date: 12/12/2022

TEST NAME			METHODOLOGY	LOINC CODE	
Cholinesterase, Plasma			Kinetic Spectrophotometric		
SPECIMEN REQUIREMENTS					
Specimen	Specimen Volume (min)	Specimen Type	Specimen Container	Transport Environment	
Preferred	1 mL (0.5)	Plasma	EDTA (Lavender Top)	Room Temperature	
Instructions	Specimen Storage: Room tem Specimen Collection: Separat anticoagulants is NOT recomme	imen Type: Lavender-top (EDTA) tube imen Storage: Room temperature imen Collection: Separate plasma from cells immediately and place in transport tube. Mark transport tube "plasma". Use of other bagulants is NOT recommended. imen Stability: Ambient: 14 days, Refrigerated : 14 days, Frozen: 14 days			
GENERAL INFORMATION					
Expected TAT	2 - 4 days				
Clinical Use	succinylcholine (a ane much smaller concentr	Approximately 1 in every 2500 individuals has inherited defective or deficiency of the enzyme (pseudocholinesterase) that metabolizes succinylcholine (a anesthetic agent). With "normal" dosage, these individuals have prolonged apnea. Such individuals are responsive at much smaller concentrations of this anesthetic agent than the general population. Low concentrations of Pseudocholinesterase are observed in individuals exposed to organophosphorous insecticides and patients with hepatic dysfunction.
