## Metanephrines, Fractionated 24-Hour Urine

Order Name: **METANEPH U** 

Test Number: 3800350
Revision Date: 12/12/2022

TEST NAME	METHODOLOGY	LOINC CODE
Metanephrine, Urine - per 24h	Quantitative HPLC/Tandem Mass Spectrometry	19049-6
Normetanephrine, Urine - per 24h	Quantitative HPLC/Tandem Mass Spectrometry	2671-6

Normetanephrine, Orm	le - per 2411	Quali	native HPLC/Tandem wass Spectrometry	2071-0	
SPECIMEN REQUIREMENTS					
Specimen	Specimen Volume (min)	Specimen Type	Specimen Container	Transport Environment	
Preferred	10 mL aliquot (2.5 mL aliquot )	Urine, 24-hour	24 hour Urine Container	Room Temperature	
Instructions	Notes: 2.5 mL aliquot (Note: This volume Does NOT allow for repeat testing.)  Specimen Type: Plastic urine container with no preservative or 6N HCl.  Container Detail: No preserv  Specimen Storage: Room Temperature  Specimen Collection: Instruct the patient to void at 8 AM and discard the specimen. Then collect all urine including the final specimen voided at the end of the 24-hour collection period (ie, 8 AM the next morning). Screw the lid on securely. Label container with patient's name, date and time collection started, and date and time collection finished. Measure and record total 24-hour volume. Mix well; send aliquot. (HCl is an acceptable preservative if required for a concurrently collected assay. PeopleSoft item number for this container is *21584.)  Specimen Stability: Ambient: 14 days, Refrigerated: 14 days, Frozen: 14 days				

GENERAL INFORMATION		
Testing Schedule	Sun-Sat	
Expected TAT	3 - 6 days	
Clinical Use	The diagnosis of pheochromocytoma can be confirmed by increased levels of the catecholamine metabolites, metanephrines, and vanillylmandelic acid (VMA). Urinary metanephrine determinations have been recommended as the most accurate screening method for patients suspected of having pheochromocytoma.
