Pneumococcal Antibody Panel (14 Serotype)

Order Name: Pneumo 14 Test Number: 5613587 Revision Date: 01/01/2025

TEST NAME			METHODOLOGY	LOINC CODE	
Pneumococcal Antibody Panel (14 Serotype)			Fluoroimmunoassay		
SPECIMEN REQUIREMENTS					
Specimen	Specimen Volume (min)	Specimen Type	Specimen Container	Transport Environment	
Preferred	1 mL (0.5 mL)	Serum	Clot Activator SST	Room Temperature	
Instructions	Specimen Type: Gel-barrier tube Specimen Storage: Maintain specimen at room temperature. Specimen Collection: Not Available Special Instructions: Testing referred to Eurofins Viracor LLC EURKS#401842 Specimen Stability: Ambient: 6 weeks, Refrigerated : 6 weeks, Frozen: 2 years				

GENERAL INFORMATION		
Expected TAT	6-11 days from set up	
Clinical Use	Evaluate the ability of a patient to produce antibody to pure polysaccharide vaccines (Pneumovax) or protein conjugated vaccines (Prevnar). A pre-and post-vaccination comparison is required to adequately assess the humoral immune response to Prevnar 7 (P7), Prevnar 13 (P13), and/or Pneumovax 23 (PNX) Streptococcus pneumoniae vaccines. Pre-vaccination samples should be collected prior to vaccine administration. Post-vaccination samples should be obtained at least 4 weeks after immunization. Testing of post-vaccination samples alone will provide only general immune status of the individual to various pneumococcal serotypes. In the case of pure polysaccharide vaccine, indication of immune system competence is further delineated as an adequate response to at least 50 percent of the serotypes in the vaccine challenge for those 2-5 years of age and to at least 70 percent of the serotypes in the vaccine challenge for those 6-65 years of age. Individual immune response may vary based on age, past exposure, immunocompetence, and pneumococcal serotype.
